

## EDUCATION

---

<b>Lexington, KY</b>	<b>University of Kentucky</b>	<b>Graduation Date: Dec. 2022</b>
<ul style="list-style-type: none"><li>- <b>Major:</b> Computer Science, B.S. (GPA: 3.94, Specialization: <b>Computer Graphics / Math</b>)</li><li>- <b>Skills:</b> C++, C, Python, OpenGL, DirectX, Vulkan, GLSL, HLSL, GLES3, Linear Algebra, Numerical Methods, Computer Graphics, C#, Kotlin, Houdini, Blender, Unity, Machine Learning, Artificial Intelligence, SQL, SVN, Perforce</li></ul>		

## WORK EXPERIENCE

---

<b>Graphics Programmer Intern</b>	<b>Blizzard Entertainment</b>	<b>May 2022 – Aug. 2022</b>
<ul style="list-style-type: none"><li>- Contributed to the development of new particle system using <b>DirectX, C++, and HLSL</b> for AAA Game Engine</li><li>- Developed <b>compute shaders</b> in <b>HLSL</b> for multithreaded <b>simulation</b> of thousands of particles on the <b>GPU</b></li><li>- Used frame capture tools such as <b>RenderDoc</b> for debugging and profiling of API events, buffers, and more</li></ul>		
<b>Android Graphics Engineering Intern</b>	<b>Twitch / Amazon</b>	<b>May 2021 – Dec. 2021</b>
<ul style="list-style-type: none"><li>- Owned creator tools that improved time spent streaming by &gt;15% developed with <b>Dagger, RxJava, and Kotlin</b></li><li>- Pioneered system utilizing <b>OpenGL ES rendering</b> pipeline and <b>GLSL</b> shaders for rendering dynamic visuals</li><li>- Developed automated <b>unit tests</b> for MVP architecture to maintain <b>CI/CD</b> with JUnit5 and Mockito</li></ul>		
<b>Software Engineering Intern</b>	<b>Intel Corporation</b>	<b>Oct. 2020 – May 2021</b>
<ul style="list-style-type: none"><li>- Analyzed system design using <b>computer architecture</b> knowledge to design validation tests in <b>C</b> and <b>Python</b></li><li>- Validated pre-silicon processor firmware configurations simulated on <b>FPGA</b> in <b>Simics</b> to detect vulnerabilities</li><li>- Developed scripts in <b>Bash</b> to streamline validation workflow in <b>UNIX / Linux</b> environment</li></ul>		
<b>Full-Stack Software Developer</b>	<b>University of Kentucky</b>	<b>May. 2019 – July 2020</b>
<ul style="list-style-type: none"><li>- Created a <b>data visualization tools</b> for data analysis with <b>Python, PHP, JavaScript, and SQL</b></li><li>- Revitalized <b>DevOps</b> with automated <b>CI/CD</b> using <b>Git</b> version control / <b>GitLab</b> and deploying code in <b>Docker</b></li></ul>		

## RESEARCH

---

<b>Computer Vision Research Assistant</b>	<b>University of Kentucky</b>	<b>Mar. 2020 – May 2022</b>
<ul style="list-style-type: none"><li>- Developed convolutional neural networks with <b>CUDA, Python, and Pytorch</b> for <b>computer vision</b> applications</li><li>- Developed <b>deep learning algorithms</b> for predictive analysis on machine health and aircraft engine failure</li><li>- Optimized open-source data visualization software for <b>real-time rendering</b> with <b>parallel computing / CUDA</b></li><li>- Optimized CMOS imaging device using <b>CUDA</b> and <b>MATLAB</b> GPGPU Toolbox to improve runtime by &gt;60%</li></ul>		

## PERSONAL PROJECTS

### Teapot Game Engine:

- Created a **3D realtime rendering** engine in **OpenGL** and **C++**, with build automation in **CMake**
- Designed interactive GUI using **Dear ImGui** to interact with various engine parameters and the editor
- Profiled optimizations and performance using tools such as **RenderDoc**, and **NVIDIA Nsight**
- Reimplementing the rendering engine in **Vulkan** for better control over the computer **graphics pipeline**

### Physically Based Ray Tracer:

- Implemented Monte Carlo ray tracing **3D rendering** algorithm in **C++** that handles multiple **BDRF/BSDFs**
- Distributed ray tracing workload across all cores using **C++ multithreading** and accumulating buffers
- Optimized the code base using acceleration structures such as bounding volume hierarchies

### 3D Voxel Engine:

- Developed voxel engine in **C++** using **OpenGL** for **physically based animation** and **VFX** experimentation
- Utilized **multithreading in C++** for meshing in parallel, making meshing a low-impact process in realtime

### Houdini / Unity / Unreal Engine Projects:

- Created a signed distance field ray marcher in a **HLSL** shader in **Unity** and **C#**

## OPEN-SOURCE CONTRIBUTIONS

### Godot Game Engine: ( Rendering, Core Technology, Engine )

- Fixed automatic generation of **GLSL** shaders in **C++** which caused visual error with normal mapping refractions
- Worked with the **physics** and **rendering** teams fixing bugs and regression issues with **Vulkan** and physics servers

### Blender Foundation (3D Computer Graphics Software): ( Tools, Editor )

- Used **C++** and **Boost** Library to contribute the development of a higher-precision tool for object selection
